Skeletal System Reviewer

Functions of bone

1. Support: a frame for the body.
2. Protection: skull, ribs and vertebrae shield organs.
3. Movement: bones are levers pulled by muscles.
4. Mineral storage: calcium and phosphate.
5. Blood cell formation in red bone marrow.
6. Energy storage as fat in yellow marrow.

Bone shapes

Shape	Example
Long	Femur, humerus
Short	Carpals, tarsals
Flat	Sternum, parietal bone
Irregular	Vertebrae
Sesamoid	Patella

Parts of a long bone

Part	Description
Diaphysis	The shaft; holds the medullary cavity
Epiphysis	Each wider end; spongy bone with red marrow
Epiphyseal plate	Growth plate of hyaline cartilage in children
Periosteum	Tough outer membrane with nerves and vessels
Articular cartilage	Smooth cover where the bone meets a joint

Practice terms

Term	Meaning
Osteoblast	Cell that builds bone
Osteoclast	Cell that breaks down bone
Osteocyte	Mature bone cell in a lacuna
Ossification	Formation of bone
