CIRCULATORY SYSTEM

The Heart and Blood Vessels

Grade 9 Science · Lesson slides

Three kinds of vessel

- **Arteries** carry blood away from the heart
- **Veins** return blood to the heart
- **Capillaries** swap gases and nutrients with tissues

Two circuits

- **Pulmonary:** right ventricle to lungs to left atrium
- **Systemic:** left ventricle to body to right atrium

Four chambers

- Right atrium and right ventricle
- Left atrium and left ventricle
- The left ventricle wall is thickest: it pumps to the whole body

Remember

Heart rate × stroke volume = cardiac output

about 5 litres every minute at rest
